

Intern is a linear geometric sans serif family, a curious combination of simple shapes with a raw character. Type family is carefully constructed to create the very basic forms of letters and developed with minimal optical corrections to maintain the blunt and playful character. Letters get their dynamic proportions and huge x-height from construction of 5x5 grid of squares, inspired by sketches on a checkered notebook. This results a unique geometric typeface with a powerful appearance. The new and updated version of the Intern version 2.0, reworked and released with upgrades using the color font technology.
