At this spot in 1799, a discovery was made that would shake the world. Among the rubble of the fort's foundations, a dark slab of granite-like rock caught the eye of Pierre-François Bouchard, a lieutenant in Napoleon's invading army. Bouchard had served under Nicolas-Jacques Conté, inventor of the pencil, and he quickly gleaned the significance of the lettering etched into the slab. This 762kg chunk of granodiorite, recycled from elsewhere into use as a building block, was inscribed with a decree issued in 196 BC on behalf of King Ptolemy V. Although the message is somewhat dull, crucially it was written three times: in hieroglyphs (the beautiful ancient Egyptian pictorial script that could no longer be understood), in demotic (the joined-up lettering used for everyday writing), and in ancient Greek (a known language). Here, at long, long, long last, was the key to deciphering hieroglyphs, those perfect outlines of people, animals and objects scratched into stone or written on to papyrus millennia ago. The code was finally cracked in 1822 by Jean-François Champollion, who rushed into his brother's office, shouted "I've got it!" then fainted and wasn't himself for five days. The scale of his achievement can hardly be overstated: thanks to this French philologist, and a few other scholars including Britain's Thomas Young, 3,000 years of Egyptian history, one of the world's oldest civilisations, came cascading out into the light. Also available as a snow globe ... the Rosetta Stone at the British Museum. "This is not just Egyptology," says Ilona Regulski excitedly, standing by a replica that sits where the stone was discovered. "This is the birth of Egyptology!" It's an evocative spot, now shaded by the huge spreading branches of a royal poinciana, or flame tree, named for its crimson blossom. To celebrate the 200th anniversary of this seismic unravelling, a major show about hieroglyphs, curated by Regulski, is about to open at the British Museum in London, where the Rosetta Stone now resides, the British army having taken it off the French when they cut short their campaign in 1801. A globally recognised symbol of all attempts to fathom the mysteries of the past, the stone is the museum's most visited object - and its most commodified. A huge swathe of the sizeable gift shop is devoted to the stone, its world-shattering hieroglyphs gracing ties, nail files, mint tins and snow globes. Hieroglyphs: Unlocking Ancient Egypt will put this rock star centre stage, with a supporting cast of 240 exhibits including the Enchanted Basin, a granite sarcophagus whose hieroglyphs were believed to have magical powers, giving anyone who bathed in it relief from the torments of love. Along the way, hieroglyphs will provide insights into life in ancient Egypt, from poetry and international treaties to shopping lists and tax returns.

Lee was the son of Grace Ho and Lee Hoi-chuen, a Cantonese opera star based in Hong Kong. He was born in San Francisco in 1940 while his parents were visiting the city for his father's concert tour abroad. The family returned to Hong Kong a few months later. He was introduced to the Hong Kong film industry as a child actor by his father. However these were not martial art films. His early martial arts experience included Wing Chun (trained under Yip Man), tai chi, boxing (winning a Hong Kong boxing tournament), and apparently frequent street fighting (neighbourhood and rooftop fights). In 1959, Lee, having U.S. citizenship due to his birth, was able to move to Seattle. In 1961, he enrolled in the University of Washington. [4] It was during this time in the United States that he began considering making money by teaching martial arts even though he aspired to an acting career. He opened his first martial arts school, operated out of home in Seattle.

The other day, I passed by and an old man had spread waxed paper on top of the wall and, working with a miniature pen knife, was slicing from a whole melon, discarding the skin and seeds as he went into a bowl near his trolley, and then draping each orange moon with a slice of prosciutto. It crossed my mind to stop and say something before catching my train, about his skill and how good it looked, spread out there like a picture. Someone else, a young man, actually did say something: 'e un buon matrimonio' – it's a good marriage (the melon and the prosciutto) – and the melon-cutter agreed.

After solving problems revolving around vertical planes, the development of Kupka's painting consistently turned towards space. Verticals gave him stability, but he also needed to express tension, which was accomplished with diagonals.

Terrain Thin, 75 pt

With this came a whole series of pictures called 'Vertical and Diagonal Planes'. Kupka gave the most beautiful and the most perfect of these the title 'Cathedral'. Here he combined his interests in architecture and music, which he had been interested in since his early youth. It was in France where he became inspired with the architecture of Gothic cathedrals, especially with what he called in his book 'their vertiginous musicality'.

When I was growing up, my dad had the best job I could possibly imagine: he was an arcade game and pinball technician. For me, that meant summer trips through Poland's coastal cities with their seasonal arcade parlors; peeking inside cabinets to learn programming and engineering secrets; and—of course—free games!
